Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3-7 and 10, drawn to a method of providing colorant to a contact lens, classified in class 351, subclass 177.
- II. Claims 22-44, drawn to a colored contact lens, classified in class 351, subclass 162.

The inventions are distinct, each from the other because of the following reasons:

Inventions in Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the colored contact lens can be made by another and materially different process such as a process of pad printing that does not require the use of an inkjet print head and printer assembly. Furthermore, the process can be used to make other and materially different contact lenses such as contact lenses that have patterning with surface areas greater than 6000 square microns or contact lenses with all elements spaced greater than 50um from adjacent elements or comprising less than 3000 distinct elements or having only a few colorants (not at least 25 different colors).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2873

Because these inventions are distinct for the reasons given above and the search required for any one Group is not required for any other Group, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
